**1896.**

# To my customers!

In handing this new catalogue to my numerous customers and friends, I beg to thank them for their past favors and the confidence placed in me. It shall always be my endeavour to give every satisfaction to my friends by a prompt and careful execution of their orders.

## Conditions of Sale.

Please note the following conditions of sale:

J. C. Schmidt sends out only seeds that will, to the best of his belief, give entire satisfaction; it must, however, be expressly understood that, immunity from error being unattainable and success more often dependent on climatic or local influences than is generally supposed, he warrants neither description, growth nor productiveness of any seeds he sells, nor will he hold himself in any way responsible for the crop.

All seeds will be delivered carriage paid to Hamburg, Bremen or Flushing, other charges such as for shipping and insurance will to be paid by the consignee. — Flowerseeds, not less than £ 10 in value, will be delivered carriage paid to London, except those sold by Cwt.

Should flower seeds, sold by Cwt. or vegetable seeds be packed together with flower seeds, which are free London, the freight will be deducted of the invoice.

Parcels not exceeding 10 lbs. in weight to all parts of Great Britain and Ireland will be forwarded at 1 s. 6 d. each via Hamburg or Bremen at 1 s. 9 d. each via Belgium. The last way is the shortest.

Small amounts may be remitted in postage-stamps. — Remittances either by postal-order, cheque or draft should accompany orders, or else satisfactory, well known references should be given by firms with whom I have not yet had the pleasure of doing business.

In order facilitate business I make the following suggestions to my customers:

1. Name and address to be written distinctly and in full.
2. Write out the articles wanted as much as possible in the same order as given in the catalogue.
3. As several firms of a similar name exist in Erfurt, please address all correspondence to J. C. Schmidt in full, as shown below.

Finally I should be very much obliged to my friends if they would favor me with a visit in case they pass through or come to Erfurt. I shall consider it as special honour to show every visitor over my grounds and give every desired information. In this way all my customers can convince themselves of the great care and attention paid to the growth off all my productions.

All previous seed-price-lists are hereby cancelled.

Yours most respectfully

**J. C. Schmidt,**

Seedgrower and Nurseryman,

by appointment to H. M. the King of Prussia.

**Erfurt, Germany.**

# Novelties for 1896.

## Potato „Pearl of Erfurt.“

Partial view of a field of the Potato „Pearl of Erfurt“, from a photograph July 3rd.

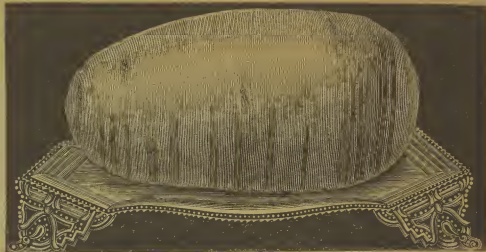

This novelty can be predicted a **grand future** and its real value is worth the **greatest attention** indeed. I harvested them already **the 3rd of July** from the open ground, but I am sure, they can be taken up still about **2 or 3 weeks earlier** if germinated before planting out in the open ground.

Belonging to the class of **Kidney**

Potatoes, they have but very few and flat eyes, a tender yellowish skin, yellow flesh, nice form, oblong, egg-shaped, a wonderful fine flavor, cooking up floury from the first beginning and evenly clear through, what can be said of but very few sorts of potatoes. Beside these remarkable advantages the **yield is immense** and far surpassing any other early ripening kind. I gathered from one acre (but cultivated on a good piece of ground in the garden) **288 Cwts.**, this being a result, of which I never saw anything equal of early potatoes before.

A heavy soil supplied with artificial manure (Nitrate of Chile) does not suit this potato, as the fruits will become watery and tasting bitter. A soil, that once has been supplied with stable manure, say one or two years before, is most suitable for growing the „Pearl of Erfurt“, which is to be considered a really delicacy for any gardener.

Cwt. 20 s., 14 lbs. 4 s.

Potato „Pearl of Erfurt.“

## July-Runner Bean.

This novelty is the earliest **Runner Bean yet in existence**, bearing about **2 or 3 weeks earlier** as any other early kind known hitherto. Its **productiveness** is almost surprising and can be **enormous increased** through frequently plucking especially of the first fruits. As this sort does not grow very tall, any amateur can have it even on a **little space** of his garden, only using **twigs** instead of stakes as always needed for all kinds of Runnerbeans and which makes the cultivation of them in most cases rather too expensive.

100 pkts. (each  $\frac{3}{4}$  oz.) 24 s.,  
50 pkts. 15 s., 1 pkt. 4 d.

## Runner Bean, Haage's Sugar Sword.

This broadpoddled **Sugar Sword** originated from the generally known and highly appreciated, improved **Götting**. From this original kind it has inherited the good property of an **exceedingly productiveness**. Its time of maturity may be denominated as early, ranging between the very earliest **Sugar** and rhishish **Sugarbean**. Their pods are very tender and thickfleshy, getting nearly the same length and breadth, as the pods of the broad **Sword Runner bean**, being almost without any threads and of an **exceedingly fine flavour**. The tender light green pods are in young condition of a slight rosy hue. The beans are **chamois coloured**. The value of this novelty is principally recognised in the breadth of pods, as there has not existed any broad poddled **Sugar Runner bean** hitherto.

100 pkts. 40 s., 10 pkts. 4 s. 6 d., 1 pkt. ( $\frac{1}{2}$  oz.) 6 d.

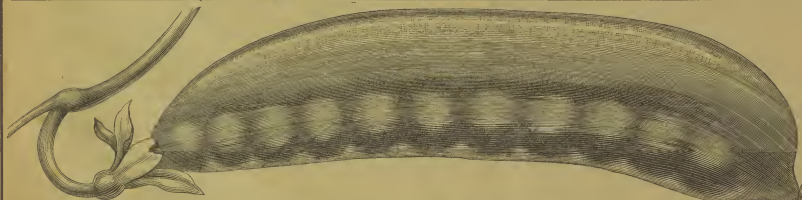

## Winter-Picking-Kale.

This already previously known and for kitchen purposes really valuable **Kale**, which, regarding to rather poor yielding of seed, almost entirely disappeared from cultures, I have pleasure in offering now this very profitable sort again. It is a perennial half high **Kale** of darkgreen colour; its stem being closely furnished with regular side shoots, which can be picked off and consumed in the same manner as any curled **Borecole**. This **Kale** has proved to be especial useful in winter (hence its name), as it can remain on its place without any protection where it was planted. In early spring (February till March already) it begins to grow again producing successively numerous fresh shoots, which also in the early spring are a very welcome new vegetable.

100 pkts. (each  $\frac{1}{2}$  oz.) 45 s.  
10 pkts. 5 s., 1 pkt. 8 d.

## Sugar Pea, „Moerheim's Giant.“

This novelty deserves general attention, as it is an acquisition of **greatest importance** for those sorts of Peas, which can be consumed in eating with their pods. The annexed figure shows the average size of the pods

exactly; they get a length of **7 to 8 inches**. Regarding to **savouriness** this is **superior to all others** even of the older pods, consequently more profitable as but little can be lost through overlooking in gathering.

100 pkts. (each about  $\frac{1}{2}$  oz.) 40 s., 10 pkts. 4 s. 6 d., 1 pkt. 6 d.

## Onion, Zittau giant round sulphuryellow.

Through a long time of continued careful cultivation, we have been successful in raising this new valuable variety. It has quite the same clear nice colour as the sulphur yellow Dutch Onion, which being generally liked for this reason, and possesses in connection therewith all advantages of the **Zittau Giant Onion**, which cannot be too highly appreciated, as there are: large size, handsome globular shape, great durability and mild flavour.

per lb. 6 s., per oz. 6 d.

DWARF-CHRYSANTHEMUM-ASTER.  
BISMARCKBROWN.

## New dwarf Chrysanthemum-Aster „Bismarckbrown“.

An entirely prominent novelty of a very remarkable colour not existing yet among all assortments of german Asters. In beginning to bloom, being salmonred and after fully developement of the flowers they show the so called „Bismarckbrown“, which mostly resembles to Terra cotta-colour.

As equal valuable Novelties I have great pleasure as to add to the former excellent acquisition:

silverygrey, hortensiaerose and bloodbrown.

100 pkts. (each 100 seeds) 40 s., 10 pkts. 5 s., 1 pkt. 8 d.

DWARF-CHRYSANTHEMUM-ASTER.  
HORTENSIAEROSE.

## Begonia „Queen of Carpet beddings“.

Begonia „Vernon“.

Showing the measures of both.

New Begonia

100 pkts. 40 s., 10 pkts. 5 s., per pkt. 8 d.

The Begonia Vernon — as a fact — has become a really favourite to all since it has been introduced. The more I think this new dwarf kind will please everyone either gardeners as well as amateurs. In appearance it is equal beautiful as its taller growing relative the Vernon, producing an abundance of bright crimson flowers and wonderful fine foliage, changing its colour from dark green to browned with metallic lustre. It is to be pronounced a really first class bedding plant and almost unsurpassed for dwarf groups.

## Excelsior Ten week Stock, in separate colours and mixture.

The pure white Excelsior Stock, which found unanimous admiration since its introduction, I am pleased to offer now — as announced already last year — in separate distinct and constant colours, viz: **bloodred and brown;** whilst **blue** in mixture of light and dark **blue, rose** in mixture of ash-, coppery- and lilac-**rose, bright copper** in yellow and dark can be offered. This enrichment of the singlebranching giant Stock will be surely welcome anywhere and find its friends.

100 pkts. 30 s., 10 pkts. 4 s., per pkt. 6 d.  
**White Excelsior** (Novelty of last year).

100 pkts. 20 s., 10 pkts. 2 s. 6 d., 1 pkt. 4 d.

## „Cupid“. The first dwarf pure white Sweet Pea.

This is an excellent novelty only getting an height of 6 to 7 inches. It does not need a long description, as the annexed figure speaks itself and shows the high value of this new introduction also for cultivation in pots. The habit is extremely dwarf and bushy and entirely covering the pot. The pure white flowers appear numerous all near to the top of short stiff stalks, in size resembling Emily Henderson, which gained so much admiration when introduced last year. The Gardeners Chronicle speaks in the highest commendations about its great usefulness for cultivation in pots under glass.

In the open ground it may be sown in rows 6 inches asunder. A garden-bed arranged of this marvellous new Sweet Pea offers an attractive almost fairy like sight. Time of flowering from May until November.

100 pkts. 60 s., 10 pkts. 7 s. 6 d., per pkt. 1 s.

## Begonia hybrida „Hero“.

Originating from B. Baumann and B. hybrida gigantea alba, this shows as most principal improvement of the giant flowering tuberous rooted Begonias an exceedingly robust growth with glossy green foliage, slightly covered with hairs and long, stiff, erect-standing flowerstalks, bearing through several weeks a great number of splendid flowers of La France-colour, being in size quite as large as those of the better giant single Begonias.

While the flowers seem to be scentless during cloudy atmosphere, there can be perceived a little fragraney of tea roses by warm sunny weather.

An excellent pot plant for indoors cultivation!

100 pkts. 60 s., 10 pkts. 7 s., per pkt. 10 d.

**Aster, paeonyflowered Perfection „cinnabar-scarlet“.**

Off all colours among german Asters, this is one of the brightest, being a **splendid cinnabar-scarlet** and especially the opening flowers show this colour very lively. In the class of Perfection Asters it represents the very same prominent position as cinnabar-carmine in the class of dwarf Chrysanthemum-Asters, to which colour this novelty bears most resemblance. The habit of growth as well as shape of flowers are both like those of the most perfect Perfection-Aster.

100 pkts. 40 s., 10 pkts. 5 s., 1 pkt. 8 d.

**Aster, dwarf paeonyflowered Perfection „blackish-violet“.**

The plants of this new colour are more branching as those of the dark purple variety; in consequence thereof they produce somewhat smaller flowers.

This new colour is the „darkest“ yet found in the whole Aster-assortment.

If viewed from some distance, the colour of the flowers seems to be nearly black.

100 pkts. 40 s., 10 pkts. 5 s., 1 pkt. 8 d.

**Dwarf Juarezi Dahlia.**

This prominent novelty cannot be too strongly recommended. It does not grow higher as about 2½ feet; it is very rich branching and produces an **abundance of flowers**. Its seed must be sown out in April and plants will be flowering from summer until destroyed by frost in autumn. The flowers are **extremely double** and of **most different colours**.

I do not fail to draw your particular attention to this novelty.

100 pkts. 20 s., 10 pkts. 2 s. 6 d.,  
1 pkt. 4 d.

**Zinnia elegans, double with large deeped flowers.**

This novelty gets a height of about 1 foot, producing **very large, beautiful fiery darked flowers**. Each flower measures about 4 inches in diameter. For cutting purposes it is almost invaluable, also for borders in the foreground of taller plants, where they are of most striking effect.

100 pkts. 15 s., 10 pkts. 2 s.,  
1 pkt. 3 d.

**Matricaria „Golden Ball.“**

This pretty novelty forms a densely-compact bush of about 13 in. high, by 10 in. across, profusely covered by a multitude of ray-less, quilled flowers of a very rich and intense golden-yellow.

Apart from general habit **Matricaria „Golden Ball“** is entirely distinct from older varieties of a more or less yellowish tint, catalogued as „aurea“ etc. and surpasses them by far by virtue of its telling colour, which is of the most striking intensity.

**M. „Golden Ball“** lends itself equally well for groups and borders and it will also be found useful for pot-culture and its single sprays for bouquets.

100 pkts. 45 s., 10 pkts. 5 s., 1 pkt. 8 d.

**Polygonum orientale pumilum album.**

Elegant new **white flowering** variety of the dwarf growing Persicaria. It forms regular and many branched bushes of 2 to 2½ feet in height, well garnished with luxuriant foliage, above which are borne on slender stems the exceedingly pretty and numerous hanging flowerspikes. Equally useful for groups or single specimens and perfectly constant from seed.

100 pkts. 40 s., 10 pkts. 5 s.,  
1 pkt. 8 d.

**Poppy,****Dwarf Paeony-flowered „Salmonrose“.**

A brilliant and attractive colour quite new among Poppies. The Flowers are very large and double, and as the variety comes true from seed, it can be employed to form highly effective groups.

100 pkts. 40 s., 10 pkts. 5 s.,  
1 pkt. 8 d.

**Helianthus cucumerifolius „Stella“.**

As an addition to longstemmed flowers for cutting purposes is always welcome, I do not doubt but that this new annual Sunflower, which I am offering, will soon be a general favourite. It attains a height of 3 to 4 feet and differs from the *Helianthus cucumerifolius* or Miniature Sunflower by its larger and better formed flowers of the purest golden yellow with a black disk. The individual flowers, 2½ to 3 inches across, are all borne on long stems and rise well above the lively green, small foliage. Sown on a sunny spot in the open ground in April, flowers may be cut daily from the end of June until the frost kills the plants. On account of its regular growth and its freeflowering habit it may also be used with advantage for large flower groups or as single specimens.

100 pkts. 40 s., 10 pkts. 5 s.,  
1 pkt. 8 d.

**Zinnia, Double Liliput, „White Gem“.**

This new variety forms a fitting companion to the variety introduced last year under the name of **Scarlet Gem**. Like the latter it is about 18 in. high, of branching habit, and produces a profusion of **tiny very double pure white flowers**, hardly exceeding a large daisy in size. By reason of their freedom of bloom the Liliput Zinnias are not only most valuable as cut flowers, but they have also excellent pot plants.

100 pkts. 48 s., 10 pkts. 6 s.,  
1 pkt. 8 d.

Sweet Pea, „Celestial.“

A novelty obtained by four years careful cross-fertilization of the well known variety „Senator“ by which a new, valuable and constant colour has been added to those of the Lathyrus family.

The Sweet Pea „Celestial“ is of very robust growth, remarkably large-flowering and very floriferous. The flowers, freely borne on slender stalks, are of a wonderfully tender aerial blue, not previously represented among Sweet Peas.

For cutting this Novelty will be found eminently adapted remaining fresh a long time.

100 pkts. 60 s., 10 pkts. 7 s.,  
1 pkt. 1 s.

Chrysanthemum carinatum,  
„Purple Crown.“

This new Chrysanthemum is of dwarf, compact and very regular growth (height about 8 inches) and beautiful yellow foliage. Its flowers, produced in great abundance, are purple scarlet ornamented inside with a sparkling golden yellow ring, the intense colour of which contrasts admirably with the purple around it.

The splendour thus afforded on the yellow foliage is strikingly impressive, and I feel sure all Chrysanthemum lovers will feel indebted for this charming new introduction. Owing to its great beauty this novelty is of extreme value for the border as well as for edgings, and on account of its protracted blooming period may well be recommended as one of the most indispensable of Annuals.

100 pkts. 60 s., 10 pkts. 7 s., 1 pkt. 1 s.

Pansy, „Fiery Faces.“

The Pansy „Fiery Faces“ is of compact growth and the flowers are of pleasing shape. The colour is purple scarlet with yellow margin and yellow eye. The three lower petals are regularly marked with large velvety purple-black spots. In Spring and Autumn they are particularly brilliant. A bed of their small „fiery faces“ inspires wonder and admiration, each flower displaying itself as if to greet us with its friendly smile. The effect is as surprising as it is agreeable and bestows on this interesting and charming novelty quite a peculiar merit as a show flower for bed or border.

100 pkts. 60 s., 10 pkts. 7 s.,  
1 pkt. 1 s.

Aster, Giant  
Comet,  
„The Bride“.

No doubt some new varieties of the splendid Giant White Comet Aster will be offered this season, but none is likely to equal in delicacy of colouring and elegance of form the novelty I now offer

„White, changing  
to rose“

is the nearest description one can give of this very lovely colouring, the flowers being firstly pure white, then white changing to rose and finally of a beautiful rose tint. It is the same variation of shades already seen in the Victoria and Mignon sections and which lends to the plant such a peculiar charm. I need hardly say that this colour is most effective on the Giant Comet Aster, with its long wavy petals like those of the Japanese Chrysanthemum.

100 pkts. 48 s., 10 pkts.  
6 s., 1 pkt. 8 d.

Aster Princess,  
white changing to rose.

This is a most charming variety, the flowers being of the same lovely and delicate hue which has now become so widely popular since appearing in the Victoria and Mignon Asters.

100 pkts. 48 s., 10 pkts. 6 s.,  
1 pkt. 8 d.

Aster Princess „Rosalind“.

This superb Aster will be definitely introduced this season. It has the same habit, the same round, short-petalled Lilliput Dahlia-like flowers, is just as floriferous and continues as long in bloom as the Snowball. The blossoms being of a most charming bright rose colour, the whole plant possesses a beauty and elegance with few other Asters can rival.

100 pkts. 40 s., 10 pkts. 5 s. 6 d., 1 pkt. 7 d.

### A beautiful Novelty. *Coreopsis aristosa* var. *mutica*.

The flowers of this sterling novelty are pale golden yellow, appearing in autumn in such a profusion, that almost nothing can be seen of the foliage. The flowers are though little, but deliciously fragrant. Being exactly margueriteshaped, they get a size, larger as a half a crown piece. The flowers are borne quite freely, most three together on 4 to 8 inches long stems; the latter becoming pretty stiff in autumn, thus making the flowers very useful for all cutting purposes. — This new *Coreopsis* ought to be sown about the middle of March in a cold frame. The seeds require 4 to 5 weeks time for germination till they come up. The young plants must be planted in small pots and later on about the middle of May — in the open ground, where they will grow rapidly within a few weeks up to a height of 3 feet and producing an immense number of flowers until destroyed by frost. If sown later as mentioned before, they must be cultivated in pots and brought indoors, as soon as unfavourable cold weather sets in. Then they will remain blooming until December.

100 pkts. 50 s., 10 pkts. 6 s.,  
1 pkt. 9 d.

### *Begonia odorata* „Aurora.“

The habit of this plant is extremely compact, the leaves vigorous, of glossy dark green colour and underneath, between the sharply marked green ribs bronze red. The fine round formed flowers, measuring 3 to 4 inches in diameter, are combined of 4, 5 or 6 petals and produced mostly three of them on stiff erect stalks exceedingly free. The colour of the flowers is a splendid bright coppery crimson, beautifully contrasting to the glossy green foliage. The delicious fragrance of this new *Begonia* resembles very much to those of *tearosa*.

100 pkts. 50 s., 10 pkts. 6 s.,  
1 pkt. 9 d.

### *Phlox Drummondii* *hortensiaeflora*, *cinnabar-scarlet*.

This new variety, beautiful either regarding to colour of his flowers as well as habit of growth, is really appreciable additions to the yet known varieties of his class.

100 pkts. 50 s., 10 pkts. 6 s.,  
1 pkt. 9 d.

### *Myosotis* *palustris semperflorens* *rosea*.

A new lovely colour of the true *semperflorens* Water Forget-me-not, being a bright, very pure rosy-pink. The habit of the plant is dwarf and compact. Flowering from early spring until autumn.

100 pkts. 40 s., 10 pkts. 5 s.,  
1 pkt. 8 d.

### Mignonette Golden Machet.

A very splendid new Mignonette. It first made its appearance five years ago in the grounds of a special grower, who has at last succeeded in fixing the variety, so as to obtain it true from seed. All the excellences peculiar to the justly popular Mignonette, recognised by every raiser as the best for forcing and pot-culture, are possessed also by this new variety. The plants are of strong compact habit, with the large crinkled leaves peculiar to the Machet, and bear long massive spiked crowded with golden yellow blossoms, of which the annexed cut gives a fair representation. This novelty is as valuable as it is distinct and cannot fail to attain a great popularity.

100 pkts. 48 s., 10 pkts. 6 s., 1 pkt. 8 d.

### *Scabiosa caucasica alba*.

The large flowers of this highly appreciable novelty are borne singly on long wirelike slender stems, being of the purest white, noble form and appear during the whole summer uninterrupted. For any garden decoration as well as cutting purposes (being a very fine stuff for different floral designs) it is almost invaluable. — This beautiful perennial *Scabiosa* comes quite true from seed and has proved to be perfectly hardy, as it passed the last severe winter without any protection.

100 pkts. 75 s., 10 pkts. 8 s., 1 pkt. 1 s.

### *Cirsium Velenovskyi*.

A new exceedingly decorative show plant found by Professor Dr Velenovsky, who is one of the most well deserved men in exploration and study of the Bulgarian flora. The plant produces the first year very ornamental leaves, bearing much resemblance to the well-known Ivory-thistle (*Chamaepeuce diacantha*). The second year after sowing they produce numerous flower stems growing up to a height of about 5 feet and bearing a great many very fine flower heads of large size, which seem to be covered with spider's web. The flowers are of a beautiful carmine red and thus representing a showplant of greatest attraction. The flower heads, if cut off before their full development, are a valuable stuff for dry (Makart) bouquets.

100 pkts. (each 20 seeds) 40 s., 10 pkts. 5 s.,  
1 pkt. 8 d.

## Valuable introductions of the last year.

### Sweet scented Tuberous rooted Begonia „Pionier“.

This novelty emanates from Begonia Baumann crossed with Begonia gigantea, scarlet. It has a **very pronounced leaviness** in itself sufficient to make it a decided acquisition. The flowers are **large, finely formed**, and of a **bright crimson colour**, they measure 3–4 inches in diameter and are borne on stout stems, well above the rich green foliage. Another good quality of no small importance is, that it is **hardier** than any other open ground Begonia, resisting equally well against continued dry weather, as against wet, cold, wind.

100 pks. 40 s., 10 pks. 5 s.,  
1 pkt. 8 d.

(This novelty originated simultaneously in my own nursery and in that of another grower with whom I have agreed as to the name.)

latter to which it bears resemblance. The advantage of its early development

### Excelsior Ten-week-stock. White.

The perpetual Giant Ten week stock was undoubtedly a great improvement on the old Type of Ten week stocks but its introduction only stimulated further activity towards perfecting this race. As an excellent race may be regarded the above well named variety.

The plant is of a **remarkably vigorous growth**, and up to a height of six inches is surrounded by a profusion of foliage, from which towers of **one single** and absolutely straight flowerspike to a height of from 24–30 inches.

The flowers are **extremely large**, of the purest white, very fragrant, and appear from the beginning of June until destroyed by frost.

1 pks. 4 d., 10 pks. 2 s. 6 d., 100 pks. 20 s.

### Cabbage Lettuce „Firstling“.

This new extra early variety fully deserves its name „**Firstling**“ far it comes in **earliness** at the head of all the open ground varieties. It has been selected from the old variety „brown stubborn head“ and is in **hardiness** and **fine flavor** fully equal to the render it very valuable as a **market variety**.

1 lb. 6 s., ¼ lb. 1 s. 9 d., per oz. 8 d.

### Forcing Cucumber „Ideal“.

This new cucumber is the result of a cross between Noa's forcing and Prescott's Wonder, and after 3 years trial and observation, has proved to have inherited from its parents all their virtues which distinguished them at the same time, without being endowed with their undesirable qualities. Under the good qualities may be named the **rapid and strong growth**, and such a wonderful profusion of fruit that this variety may without inherent hesitation be termed „the most prolific cucumber in the world“. Moreover the **beautiful shape**, the **rich green color**, its **adaptedness for forcing** and the **fine flavor**, justify to the full the appellation „**Ideal Cucumber**“.

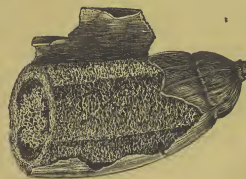

In regard to the absence of certain undesirable qualities I observe that the flesh, unlike that of Prescott Wonder is eminently **suitable for pickling**, also that its **firmness and durability**, render it fit for being sent long distances. The flesh containing **very few seeds**, makes it also a very good **salad variety**. All the good qualities of this new Cucumber have by repeated trials been proved to be constant, and are **reproduced from seeds**. As I remarked before, the **yield of seed** is very small indeed, many cucumbers contain 10–15 good seeds, most of them none at all, hence the somewhat high price, which however is insignificant if compared with the great advantages secured by cultivating the **Ideal Cucumber**.

Small pks. 5 d. each, 10 pks. 4 s. 6 d., 100 pks. 30 s.  
Large pks. 9 d. each, 10 pks. 6 s. 6 d., 100 pks. 50 s.

Though this following article cannot be considered as a novelty, it is not widely known but little or no attention at all has been paid to it hitherto. I am sure, it will be very interesting to all amateurs and therefore cannot too highly be recommended.

### Luffa petola (Sponge-Cucumber)

Peeling off the skin and the inner of the sponge-cucumber.

The seeds of this peculiar cucumber may be sown in April in good prepared soil either in frames or pots which ought to be placed in a warm room, cover the seeds about half an inch and keep them moist. After about 4 weeks the young plants can be replanted in 4 inch pots and kept in the warm room or frame, thus remaining until the beginning of June. Then they must be planted out in good fertile land and warm sunny situation, against a warm wall will suit them mostly. Also they can be planted quite freestanding, tying their long shoots on 8 long stakes forming a tall pyramid. Plenty watering and supplying of liquid manure is absolutely necessary. From July until the frost sets in, the large yellow flowers appear uninterrupted. The Luffa petola with its dark rich green foliage in connection with its beauty of flowers, climbing up to an height of 13 to 16 feet, certainly is one of the most effective and decorative plants for any garden.

The cucumber-like green fruits appearing in August, attain a length of nearly 1½ feet by a breadth of 5 inches; they look very handsome in shape and colour.

If grown under glass, the fruits will ripen perfectly with no doubt; out of doors they only get their fully development and maturity in the southern parts of Europe or in very warm and protected situations. The perfect maturity of the Luffa fruit is cognoscible through its outside getting blackbrown of colour. The shell may be pulled off, shaking out the seeds, the rest being the Luffa sponge, wellknown and liked as very useful for a great many industrial purposes.

100 pks. 15 s., 10 pks. 1 s. 9 d., 1 pkt. 3 d.

### New Japanese Open Ground Melon.

The fruit attain a length of 16 inches and often weighs four pounds, it ripens very early and has a **delicious fragrance**. The skin alabaster white, and becomes when ripe, **yellow**. The flesh is **soft melting** and of **fine flavor**. Each plant produces about 10 fruits. Planted out early in June, the plant commences to form fruit by the middle of July and fully developed and ripe fruit may be gathered in the beginning of September. Like the Japanese climbing cucumber it has the advantage of remaining free from insects, and is unlike most other melons very hardy. But it has rendered, that in the middle and northern parts of England the fully developed

land a cold frame is necessary especially the last time to development and maturity of the fruits under glass, while in the southern parts they will be able to ripen perfectly in the open ground.

100 pks. 25 s., 10 pks. 3 s., 1 pkt. 4 d.

A Rose plant 3 months after sowing.

View of a rose field, sown 3 years ago.

The same growing the 2<sup>nd</sup> year.

## **Rosa polyantha multiflora, dwarf perpetual.**

**A Rose, grown from seed like an annual (summer) flower.**

Though it may be called a pretty toying, it surely will please everyone and I would rather advise any seedsmen to have a good stock of seed, as the demand for it undoubtedly will be great. **Any amateur can cultivate his Roses himself from seed.** In January till March the seeds must be laid or sown singly or several together in small pots and good soil, covering them about  $\frac{1}{4}$  of an inch and then frequently watering will be required. After a three months cultivation you will have small bushes of Roses, bearing numerous very neat single, semi-double and double flowers of white and pink colour. The following autumn the bushes must be planted either in the open ground or in larger pots and kept indoors but cool during the winter. Year by year the bushes will grow taller, producing larger, better shaped and more double flowers.

One of the above engravings shows a plant of 3 months after sowing, 10 inches in height, which has been grown under the above mentioned circumstances by an amateur.

100 pkts. 30 s., 10 pkts. 4 s., 1 pkt. 6 d.

## **Oxalis tropaeoloides Aurora.**

”

”

## **Brilliant.**

Two different and distinctly variegated varieties of this old garden favourite.

The dark ground colour of the leaves of **Aurora** are marked and painted partly more or less with a beautiful salmon-rose colour. It does germinate with yellow seed leaves and about 60 to 70 per cent comes true from seed.

The marking of the leaves of **Brilliant** is brighter and more effective I dare say. But this variety cannot be called a „Novelty“ because I have been told, that the variety I have named Brilliant was shown in 1872 under the name of **Oxalis tropaeoloides rosea-picta**, but that it has been lost since.

**Brilliant** does germinate with white seed leaves and about 70 to 80 per cent does come true from seed.

The dark ground colour of the leaves of **Brilliant** is marked in the same way like those of **Aurora** but the colour is a bright rose changing to crimson.

These two colours are forming in companion with the golden yellow small flowers a very striking but pleasing effect.

It has been awarded a Silver Medal at the Jubilee-Exhibition at Magdeburg (August 29. to September 8. 1895).

I would further mention that **Aurora** does not change to the colours of **Brilliant**, nor do the leaves of **Brilliant** turn like those of **Aurora**.

The intensity of colouring is so vivid and attractive that both are worth a place in the garden. They will be found to be very valuable for rockworks, beds and edgings but also very suitable for cultivating in pots.

**The Gardeners Chronicle** of October 5<sup>th</sup> 1895 p. 360 says:

The specimens which accompanied this note were exceedingly pretty and high coloured.

Each variety separate:

100 pkts. (each containing 50 seeds) 60 s., 10 pkts. 7 s., 1 pkt. 9 d.

Zürich, extra curled very tender	—	0 9

### Borecole or Kale.

Erfurt Select Dwarf Green Curled, yellowish green, the hardiest, finest curled, and best-flavoured winter-variety	130	1 5
Dwarf Green Curled (German Greens) a splendid stock	100	1 2
" Purple Curled, very fine	126	1 4
These three distinct and hardy varieties produce masses of elegantly curled leaves, which are highly ornamental for garnishing, habit dwarf and compact. When prepared for table the flavour is excellent.		
Intermediate Green Moss-curled, new, extra fine	—	2 0
Tall Green Curled, extra	125	1 4
" Purple Curled	—	2 2
Winter Piking Kale see Novelties page 2.		

### Brussels Sprouts.

Bangholm Invincible, the best variety in cultivation	—	2 2
Dwarf Extra Selected	—	1 10
Erfurt improved Intermediate, excellent and productive, of robust and vigorous growth. The stems are covered with compact globular sprouts of good flavour	—	2 0
Tall, very fine	—	1 5

### Cabbage.

My Cabbage Seeds have been saved only from carefully selected heads.

#### a. Early Varieties.

Henderson's earliest Summer, wellknown, of very fine stock	160	1 9
Erfurt Small Early White, one of the earliest and finest varieties for spring-and autumn-sowing	182	2 0
Earliest Blood Red Erfurt. A pickling Cabbage coming in at the same time as the best early Cabbages. It is also dwarf and compact in habit, and will prove acceptable in almost every garden. It is by far the earliest red Cabbage that has yet come under my notice and of fine quality. Colour deep blood red	900	3 2
Early Comical (Cassel)	—	2 4
St. John's Day, dwarf, very early	—	1 11
Schweinfurt, Largest White, very early and tender	250	2 8
Winnigstadt, pointed, a fine, early sort	185	2 0

#### b. Late Varieties.

Brunswick, Largest White, Late Shortstemmed (Dwarf Drumhead), best keeper and heaviest cropper	172	1 10
" Large, Late, good quality	126	1 4
Erfurt Large White, the best of the Intermediate Varieties, coming in before Flat Brunswick, heavy cropper	176	1 11
Blood red Dutch, Early Large Utrecht	176	1 11
Magdeburg Large White, very solid, the "Sauerkraut" variety	142	1 6
Oxheart large	—	3 0
Jersey Wakefield, true	126	1 4
Amager, danish Winter	—	3 6

### Capsicum.

Long Red Capsicum	—	1 3
Tomato-shaped or Squash, Red	—	2 4

### Carrot.

Great care is bestowed on the selection of Carrots; they are unsurpassed in quality.		
Altringham Improved Long Red	26	0 4
Carentan, half long, very handsome carrot, about 8 inch. long, stump-rooted and almost without a core	72	0 10

Carrot, cont'd.		Cwt.	lb.
		s.	d.
Earliest Horn, or Paris Scarlet French fine for forcing		72	0 10
" Red Douwick, for forcing		62	0 9
James's Scarlet Intermediate		31	0 5
" clean rubbed seed		50	0 8
Long Red Surrey (Brunswick, or Long Orange) for general crop		23	0 4
" clean rubbed seed		35	0 5
Nantes early, half long scarlet, improved stump-rooted			
Horn, sweet, of very fine strain; excellent for the home garden and market		42	0 6
" clean rubbed seed		65	0 9
Long White Belgian, green top extra		23	0 4
" clean rubbed seed		35	0 5
" Yellow, good feeding variety		24	0 4
" clean rubbed seed		36	0 5
" Belgian, green top, excellent		22	0 4
" clean rubbed seed		30	0 5
" red St. Valery		39	0 6
" clean rubbed seed		56	0 8
The last 4 varieties are for feeding stock, specially horses by whom they are much relished. They grow about 20 inches long, are enormously productive, keep well and are considered very nutritious.			

### Cauliflower.

The Erfurt Cauliflower is well known to exceed in quality any other sort in cultivation. The seed I offer is from the best market-garden strain.

**Erfurt Dwarf Earliest**, the first variety in cultivation and the best for forcing, as well as open ground, the seed here offered has been saved from the finest self grown Erfurt Market Garden strain oz. 7 s. 5 d.  
**Dwarf Early 2nd** quality very good " 4 " 10 "  
**Veitch's Autumn Giant** (Early Italian Giant) very large, white heads, excellent sort for northern climates — 6 0

### Celery.

**Turnip-rooted Celery**, Roots when cooked and sliced and used with vinegar and oil, make a delicious salad.

Erfurt large white, extra fine	160	1 9
Naumburg Giant	170	1 10
Prague Giant, very large, smooth and tender	—	2 0

### Chicory.

Large, rooted Long Magdeburg improved	40	0 6
Spotted-leaved Salad, very fine	—	1 6
Witloef, Brussels variety, very tender	—	1 3

### Corn Salad.

Broad-leaved Dutch	46	0 7
" Italian	—	1 0
Cabbaging, Dark Green	56	0 8
Common	36	0 5

### Cress.

Common or Plain	13	0 3
Extra Curled, excellent	16	0 3
Water-, Erfurt, very mild and tender, true oz. 1 s. 0 d.	—	13 2

### Cucumber.

My Cucumber Seeds are all of my own growth, and very prolific, where as those grown in warmer districts furnish large plants but little fruits.

#### Open Ground Varieties.

Green Middle-sized, a great cropper	242	2 7
Green Longest Improved Serpent, 14 to 16 inches long	410	4 4
Chinese Long, remaining Green	—	4 6
Green Long Grecian from Athens, excellent	400	4 3
" Long Prolific	276	2 11
Shortest green earliest of all	125	1 4
Japanese Climbing Cucumber. Imported seed	—	10 —
" " Home grown seed oz. 2 s. 5 d.	—	25 —

#### Frame-Varieties.

Emperor William, new, cross between Noa's Forcing and Rollison's Telegraph, is longer and thicker than the last, contains very few seeds, and yields an immense crop.	—	37 0

## Tree-Seeds.

As usual with Tree Seeds I give no guarantee whatever as to their being true to name, or of good vitality, as the latter cannot, with most kinds be tested before sending them out, while for the former I have to rely on my home and foreign collectors I send out only such Seeds as I believe to be reliable and the best that can be had; if not approved of, they must be returned carriage paid at once, in which case I take them back at full value. If this is not done, any subsequent complaints cannot be entertained.

Snapdragon.	

## Trade Customers

will kindly take notice of a very showy, cheap and ready selling article for which a great demand has ensued. Pockets with coloured representations of Flowers and Vegetables are indeed no Novelty in England and Amerika, but the pictures are primitively executed, not elegant and attractive, while the article I now offer cannot fail to please.

My introduction consists of Pictorial Envelopes for small Flower-seed Collections in 2 exquisite designs. Pictorial Flowerseed-Pockets in 60 of the most popular varieties and Pictures of 30 of the best vegetables, which stand in their execution far above those now in use. I supply Pictorial-Envelopes and Flowerseed Pockets as well as Vegetable-Pictures at the following very low rates.

## Pictorial Envelopes,

4 inch. by 6 inch. in 2 splendid designs, ready for filling.

Price 8 s. per 100 or 75 s. per 1000 Envelopes.

## Pictorial Flowerseed-Pockets.

3 1/4 by 2 inches, ready for filling, with name below the picture and cultural directions in English, German and French on the back in 60 varieties (less than 100 Pockets of one kind cannot be supplied).

Price 1 s. per 100 or 9 s. per 1000 Pockets.

## Vegetable-Pictures,

4 2/3 by 2 2/3 inches, in 36 varieties, without pocket, for pasting on paper bags.

Price 9 d. per 100 or 7 s. per 1000 Pockets.

Larger quantities at reduced rates.

### — New! —

## Clover-seed examination machine.

The clover seeds which are to be examined come out of a slit, which can be regulated, and are spread on a spride of India rubber without end moved on by a little wheel. — A removable microscope is placed in the midst of the stripe so that each single grain must pass revue. — The examination proceeds very quickly and easily, it is not possible, that a grain can roll away. — Little chests are placed on the side for the weed-grains sorted with tweezers. — The pure seeds roll in a chest at the end of the machine. — The instrument is recommended specially for seeds-control-stations and seedsmen and it is indispensable for precise examinations. — All other seeds can be examined by this machine. — Length 16 inch., breadth 6 inch., height 12 inch.

Price 25 s. included package.

# New plants, highly recommended.

## New perpetual Rose „Venus.“

(J. C. Schmidt 1896.)

This is an improvement of Général Jacqueminot, being the very best of several thousand seedlings. The flowers are of large size, nice solid structure, very double, velvety dark-purplered of colour and extremely fragrant. They are produced quite freely one or two on stiff stalks. Its branches are proportionally little furnished with thorns. The foliage is of fine rich green colour. These improvements are very important and securely get the preference before its original kind.

Dwarf inoculated young plants net 2 s. 6 d. each.

## New Polyantha Rose „Kleiner Liebling“ (Little darling).

(J. C. Schmidt 1896.)

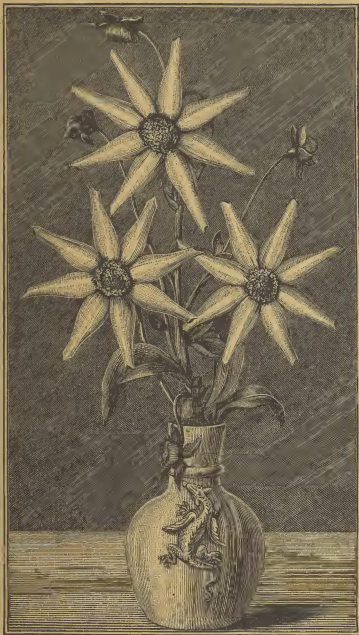

One of the most abundantly, smallflowering roses. The flowers appear in large clusters, producing very often 100 and even more very neat flowers. In shape the half opened flowers resemble very much those of the wellknown and highly admired Melle Cécile Brunner, while the colour shows a beautiful bright carminrose gradually turning to pale rose. Although the flowers are but semidouble, a group of this „Little darling“ with its immense richness of flowers offers a splendid sight. This valuable novelty is the result of a cross between „Polyantha grandiflora“ and „Fellemburg“. — Dwarf bushes net 2 s. each.

## New Japanese Hybrid „Anemone Rose.“

(J. C. Schmidt 1896.)

A half climbing species with beautiful camellia like dazzling green foliage. The flowers resemble in shape and colour the very much liked Anemone japonica elegans, which as generally known, get a size of a five shilling piece and larger. The colour is a delicate bright silvery rose. As a weeping rose this new introduction surely will gain a great future, especially as it is hardier in every respect and blooming better than its relative variety „Camellie“.

Dwarf inoculated plants net 3 s. each.

## New single Cactus-Dahlia „Hermann Kiese.“

(J. C. Schmidt 1896.)

This being an exceedingly notable variety, producing beautiful flowers clear above the foliage, of true cactus form with upward crooked petals fiery dark purple of colour, in all a marvellous charming appearance. I am perfectly assured, it will entirely remove within a short period of time the original common single flowering Dahlias. It is a really grand and effective acquisition, very floriferous and quite worth the most extensive attention. For cutting and any garden decoration purposes this novelty is of greatest importance.

Young plants from cuttings for May delivery,  
net 3 s. each.

## A brief report of the cultural state and seed crop of Vegetable- and Flowerseeds

grown by

**J. C. Schmidt**

Seedgrower, Nurseryman and Florist,

**Erfurt.**

The last severe winter we have had, has caused considerable damages to most of our biennial plants in contrariness to previous years. The cultural state of Cabbage, Savoy and Kohlrabi was deficient, whilst Carrots, Leek, turniprooted Parsley and Chicory have wintered safely; also showed Mangel Wurzels, Beetroots and Spanish Radish, wintered in pits, an excellent condition. Onions were partially rotten during the last winter and only half of those grounds, which had been reserved for that purpose, could be planted with Onions.

With sowing and planting of the early articles could not be commenced before the end of March, nevertheless all labour in tilling, sowing etc. good and quickly could be done without interruption. Regarding to germination and coming up of the seeds, there was everything that could be desired.

For the plantation failed a thoroughly rain till the end of April, but then the atmospheric fall in connection with heavy rain came so rapidly, that any work for later articles only could be carried out with difficulties and on many planes, which had been destroyed by weather and heavy showers, any work has been done twice.

Dwarf Kidney Beans and Cucumbers did not germinate so well as they ought to do owing to the thick crust of earth, and of many sorts the cultural state was not even good.

The plantations of summer flowers (annuals) also could not be carried out quite without difficulties, but nearly all sorts

showed an excellent growth notwithstanding and secured a good crop, excepted Pansies, which considerably lost through the periodical wet weather and soon died off.

Of Asters, which have been grown extensively to meet the scarcity of this article of last year, there will come a large stock on the market perhaps far exceeding the want, at least regarding to some varieties.

Borecole, Savoy, Cabbages, Cauliflower, Kohlrabi and Radishes have been greatly damaged through the rape-seed beetle, which appeared in these districts almost destroying the seed crop of the above articles. Although the yield of Radish has been a medium one, whilst of all others but one quarter of the usual crop could be yielded.

Mangel Wurzels, which were very promising, lost somewhat in quantity in consequence of several storms, but in quality they were exceedingly good.

Dwarf Kidney Beans and Cucumbers have been sufficient, whilst the crop of Japanese Climbing Cucumbers again was really superior in all respects.

Peas, Cornsalad, Carrots, Chicory, plain and turnip-rooted Parsley, Cabbage Lettuce, Leek, Onions, Spinach, Beetroots and Runnerbeans were all entirely satisfactory and could be brought in quite clean and dry, as the weather was very favourable for the purpose.

Defun

Seedsman to His Imperial Majesty  
the Emperor of Germany.
